CS16, 10S, **H06**, due **Fri Lecture 04.09**—Etter 2.3 and handout, (assignment, operators, operands)—Total Points: 50
Available online as http://www.cs.ucsb.edu/~pconrad/cs16/10S/homework/H06—printable PDF

Name: (4 pts) _____ Umail Address: (4 pts) _____ @umail.ucsb.edu

Lab Section (2 pts)—circle one: 9am 10am 11am noon unknown

(Note: For now, circle the lab section you are registered for on GOLD. If you need to request attendance at a different lab section because of an ACTUAL SCHEDULE CONFLICT, please email pconrad@cs.ucsb.edu with details)

This assignment is due **IN Lecture on Friday, 04.09.**
It may ONLY be submitted Lecture, in Chem 1171 at 1pm on Friday.
You must come IN PERSON to turn it in during your assigned Lecture section.

Late Policy: No email submission allowed—and don't "slip it under my door". If you need to make it up, you must do so during office hours, or make an appointment to see me, and you must request this appointment within 48 hours of when the assignment was originally due.

Personal Day/Sick Day policy: Everyone is permitted one "personal day/sick day" when you get to make up a missed homework assignment for free during office hours or via appointment. After that, you may not make up the homework assignment—you can only earn back the points through extra credit opportunities.

(For more details, see the syllabus and the homework policy)

In addition to reading Etter 2.3 again, please also review the following handout that was distributed in lecture, and is also available online at this link:
http://www.cs.ucsb.edu/~pconrad/cs16/10S/homework/H06/handout

Once you've read that handout, write answers to the questions on this sheet (use the PDF link to print a copy of this if you weren't in class).

1. **Question:** Given the expression 3 + 4 * 5

   Note that you don't have to give as detailed an explanation as on the handout—those detailed explanation were to help you understand where the answers came from. All that you need to provide below is the actual answer to the question.

   a. (2 pts) What is the value of the expression?

   b. (2 pts) What is the type of the expression?

   c. (2 pts) How many binary operators are in this expression?

   d. (2 pts) What is the left operand of the * operator?

   e. (2 pts) What is the right operand of the + operator?

Please turn over for more questions to answer

Continued from other side

2. Question: Given the expression 6 == (2 + 4)

    a. (2 pts) What is the value of the expression?

    b. (2 pts) What is the type of the expression?

    c. (2 pts) How many binary operators are in this expression?

    d. (2 pts) What are the operands of the == operator?

3. Question: Given the expression 7 > (2 + 4 * 5)

    a. (2 pts) What is the value of the expression?

    b. (2 pts) What is the type of the expression?

    c. (2 pts) How many binary operators are in this expression, and what are they?

    d. (2 pts) What are the operands of the + operator?

4. **Question**: Suppose that x is a variable of type int, with the value 3, and y is variable of type int with the value 2.

    In the expression x = - (y * 3)

    a. (2 pts) What is the value of the expression?

    b. (2 pts) What is the type of the expression?

    c. (2 pts) How many binary operators are in this expression?

    d. (2 pts) How many unary operators are in this expression?

    e. (2 pts) What is the operand of the unary operator?

    f. (2 pts) What are the operands of the = operator

5. (2 pts) Briefly explain the difference between the = operator and the == operator.

End of H06
